

Abstract

5 A method of transferring a transfer element of a donor sheet to a receptor includes
forming an organic layer on a receptor substrate and forming a transfer element on a donor
sheet, where the exposed surface of the transfer element is organic. Either the surface of
the organic layer or the exposed surface of the transfer element (or both) is roughened
using a plasma treatment. The transfer element of the donor sheet is then selectively
10 thermally transferred to the surface of the organic layer.
